Cool, clear, light south breeze. Temp = 46 F.  
Low-L running this morning, cranking data onto L00037 in unit 1  
still. Rewound video tape for tonight's "hunting" expedition.

MKIII COMMENT: Fri May 6 17:05:17 GMT 1994  
Loaf of bread display high this morning. Lots of haze in saddle  
apparently to altitudes higher than Mauna Kea summit, sky a dirty  
white near sun.

DPMON COMMENT: Fri May 6 17:08:09 GMT 1994  
Daystar filter feels warm to the touch, probably working OK.  
Disc looks barren, but may try running thru a temperature range  
of 1.0 to 8.0 to see if contrast improves at other than 5.00 temp.  
setting.

DPMON COMMENT: Fri May 6 17:12:13 GMT 1994  
Daystar set to 1.0

DPMON COMMENT: Fri May 6 17:56:03 GMT 1994

DPMON COMMENT: Fri May 6 21:09:37 GMT 1994  
Tried varying exposure in limb mode to see if we could converge on  
the same exposure for limb and disk mode. Using 50 for limb darkens  
the background and causes some of the fainter small prominences to  
get very faint. Brighter prominences do not suffer as much.

DPMON COMMENT: Fri May 6 21:29:43 GMT 1994  
Daystar teemp set at 8.0

DPMON COMMENT: Fri May 6 21:41:32 GMT 1994  
Doing some manual exposure variation for a while.

Fri May 6 21:46:56 GMT 1994: Patrol Start

DPMON COMMENT: Fri May 6 21:52:11 GMT 1994  
Daystar temp set back to 5.0

DPMON COMMENT: Fri May 6 22:19:39 GMT 1994  
Captured limb and disc images for David Elmore with limb exposure  
at 50, # summed: 4, and disc image at temp = 5.0, exposure = 50,  
and # summed = 4.

LOW-L: L00037 in unit 1

DPMON COMMENT: Fri May 6 22:23:45 GMT 1994  
Daystar temperature test summary: 5.0 looks best.  
Will need to wait for a day with more structure on disc to  
determine any further improvement.
