

Mauna Loa Solar Observatory Observer's Log

---

Wed May 25 16:59:40 GMT 1994

Year: 94 Doy: 145

Observer: koon

COMMENT: Wed May 25 16:59:49 GMT 1994

Medium cirrostratus, no wind, temp. ~45 F, probably no observing today.

COMMENT: Wed May 25 17:17:20 GMT 1994

Wind is up to ~5 mph from the east, cirrus clouds continue from the west.

LOW-L COMMENT: Wed May 25 17:19:26 GMT 1994

Still running correctly, tape L00047 popped out of drive #0 and drive #1 is taking data, installed tape L00049 in drive #0.

COMMENT: Wed May 25 21:09:07 GMT 1994

GONG TEST INSTRUMENT: Removed and inspected, looks good and water-tight, the setscrew that couples the instrument mount to the polar axle was loose so I tightened it. Now there is very little slop in the drive mechanism, I also loosened the clutch to prevent cable damage if it winds all the way up. Reinstalled the same instrument and will align it over the next few days.

COMMENT: Wed May 25 21:36:20 GMT 1994

TAPES:

LOW-L: L00048 in drive #1, removed L00047 from drive #0 and installed L00049.
