WEATHER COMMENT: Sat May 20 18:01:39 GMT 1995

Thin cirrostratus overcast, wind=5 mph from the NE, temp=40 F.

COMMENT: Sat May 20 18:02:12 GMT 1995

Today I start the modified Saturday schedule, the observing day is shifted 1.5 hours later in an attempt to better document and solve the lowl crash problem which tends to happen a lot on Saturdays. A lot of times the lowl will crash at least twice on Saturdays (usually when taking data on drive #1) and nobody is here to start it up again in the afternoon, but now I will be here later.
