COMMENT: Wed Jun 14 20:06:03 GMT 1995  
Opened top of dome.

WEATHER COMMENT: Wed Jun 14 20:23:12 GMT 1995  
clear.

DPMON COMMENT: Wed Jun 14 20:34:55 GMT 1995  
After several iterations of lengthening and shortening the east and west coude bench support struts separately and in unison, I managed to move the image as close as I could to the center of the screen (center of the CCD?).  
Net adjustment was .75 turns CW on the east strut and 2.5 turns CCW on the west strut.  
Rechecked effect of M1 adjustment and the image is still centered on interference filter wheel aperture.  
Leaving alignment this way for now. P00376 will be mailed today with the regular tape mailing.
