LOW-L COMMENT: Tue Jan 2 22:28:46 GMT 1996

Tape L00364, which was having data written on it today, popped out of the drive about an hour ago, L00365 also was popped out. Tried inserting L00365 but it kept popping out. Stopped the program, cycled the power to the drives and restarted everything with L00365 in drive #0 and L00366 in drive #1. Also cleaned drive #1 since the lights were flashing.

COMMENT: Tue Jan 2 22:31:46 GMT 1996

Still having problems with the network connection, we have been down since last week. The NOAA guy who is in charge of the network has been on furlough so we haven't been able to fix the problem. I'll stop by the building that has our repeater in it to see if there is anything I can do before I leave.

DPMON COMMENT: Tue Jan 2 23:03:51 GMT 1996

Tape L00365 popped out again and the program started writing to L00366. I removed L00365 and replaced it with a new tape (labeled L00365) and restarted everything.
