Comment--Sat May 4 20:28:53 GMT 1996
Extended dome slot.

Comment--Sat May 4 21:00:38 GMT 1996
The Spar kept losing tracking in dec, I removed the weight I added yesterday,
I am still in the process of balancing it.

CHIP--Sat May 4 21:01:55 GMT 1996
End Flat
CHIP--Sat May 4 21:02:54 GMT 1996

Comment--Sat May 4 21:29:55 GMT 1996
I got the Spar to track in dec, but RA may suffer in the morning due to
added weight near the front of the Spar.

CHIP COMMENT: Sat May 4 21:37:20 GMT 1996
The CHIP instrument appears to be stalled, I don't see any activity on the
Status window and the Program field shows 21:01:55 though the current time
is about 21:38. I tried to End then restart Program and Patrol without
any change, no error messages anywhere, maybe it is related to the Spar
being pointed off the sun for a while until I got it balanced enough to
continue tracking. Will stop for today.

Comment--Sat May 4 21:41:40 GMT 1996
Stopping observations to do some cleanup and balancing in the dome.

CHIP--Sat May 4 21:43:09 GMT 1996
End Patrol
CHIP--Sat May 4 21:48:56 GMT 1996
CHIP--Sat May 4 21:54:09 GMT 1996

CHIP--Sat May 4 21:59:43 GMT 1996

CHIP COMMENT: Sat May 4 22:01:49 GMT 1996

It looks like if this stalling happens again we can kill the Patrol process
to get back in control of CHIP.

DPMON COMMENT: Sat May 4 22:22:10 GMT 1996

Adjusted the Coude bench encoder to match the ephemeris HA.

CHIP NOTE: I added this with vi at 23:30. I had trouble getting the
CHIP computer to exit windows. This happened while David was here and
we rebooted by rlogginine in from Nene, so I did it again. I logged in
again and checked if only Camera and Xsun were active, they were, so I
exited Windows and logged off like normal.

Comment--Sat May 4 23:07:28 GMT 1996

Activity report:

QP: 41; 70; 120; 230; 293.

No coronal activity.
