MKIIII COMMENT: Mon Oct 21 22:11:55 GMT 1996

With flat correctors applied, I got the P+S and P-S waveform pretty nice
with the opal in. I kept getting a bunch of spikes in the
upper end of the waveforms when correcting. Tried swapping
corrector boards and DCSB analog boards AN2 and AN4 but could not
get rid of the spikes nor the pegged corrector table (light).

In cirrus now so I will regroup and try again next clear opportunity.

May try putting height mask in with taped slots 1 and 3 to check
if detectors are really aligned up/down as assumed.
