MKIII COMMENT: Wed Dec 18 18:59:46 GMT 1996

Experiencing radial noise again. problem may be in connector contacts

and not in wiring, which was re-done.

MKIII COMMENT: Wed Dec 18 19:18:16 GMT 1996

Found that wire in adjacent connector (to the one I repaired last week)

is also flaky when wiggled. Taped it to barrel flange for now to

keep it from shaking loose.

WEATHER COMMENT: Wed Dec 18 19:37:43 GMT 1996

thin cirrus

MKIII COMMENT: Wed Dec 18 21:00:43 GMT 1996

MKIII worked OK with cable taped. Stopping MKIII to repair the connections
at the connector.

MKIII COMMENT: Wed Dec 18 21:54:13 GMT 1996

Previous problem connector was designated 191 on G. Siedelberg sketch DCSA 1A1 in Barrel Misc. folder. The loose side was the Line driver side of the connector. Today's problem showed up in its paired connector, designated 190. I did not see any obvious breaks so it might have been a cold solder joint-gone-bad-and-helped-by-a-jolt-from-my-head.

The other possibility is a break in the cable. I re-dressed the cable and resoldered the wires (this time the problem was in the DCSA side of the connector). I test-wiggled the cable and saw no noise so hopefully the problem got fixed.

MKIII COMMENT: Wed Dec 18 22:00:48 GMT 1996

Don't panic.... MKIII is in narrow-slot config with the ADR currently

favoring the DPMON. The lost sector in the MKIII data is the dome wall.
