CHIP COMMENT: Tue Jan 7 20:27:37 GMT 1997

Had to run Fixbusy, program stalled during cal. I noticed that the Mike controller was set to local, I set it to remote and the program continued.

DPMON COMMENT: Tue Jan 7 20:48:00 GMT 1997

Stalled while in sync mode, Optics:Busy, did a Kill/Run to fix.

CHIP COMMENT: Tue Jan 7 20:49:39 GMT 1997

Stalled with Optics:Busy, used Fixbusy but that didn't work, did a Kill/Run.

DPMON COMMENT: Tue Jan 7 20:54:18 GMT 1997

An interesting thing happened, I couldn't get Run to work for dPMon until I fixed the CHIP stall with Kill/Run. Before that I kept getting the message to make the MCC ready (whenever I tried Run on the dPMon). Now the dPMon is stalled with Program:Init and Optics: Busy.

CHIP COMMENT: Tue Jan 7 20:57:38 GMT 1997

Stalled with Program:Init and Optics:Pend. Reset MCC, lost monitor display.

10 minutes later still no display, 2 red fail LEDs lit on MCC. Cycled power to MCC, 5 minutes later still no display and LEDs still lit, reset MCC, 5 minutes later have a display and LEDs not lit. Did a Run for CHIP and was able to continue observations. I did a Kill on both CHIP and dPMon before the first MCC reset.

DPMON COMMENT: Tue Jan 7 21:15:17 GMT 1997

Run started up program OK now and back to observations.
