

-----  
Mauna Loa Solar Observatory Observer's Log  
-----

Fri Mar 28 17:02:54 GMT 1997

Year: 97 Doy: 087

Observer: koon

WEATHER COMMENT: Fri Mar 28 17:02:59 GMT 1997

Light fog passing over, thick clouds from below up to just above our elevation,  
wind=15 mph from the SSE, temp=38 F.

COMMENT: Fri Mar 28 17:04:12 GMT 1997

Will wait for fog to clear before opening the dome and starting observations.

LOW-L COMMENT: Fri Mar 28 17:10:40 GMT 1997

Found both tapes popped out of their drives. Removed L00446 from drive #0,  
it should have popped out anyway. Cleaned both tape drives, although the  
cleaning lights were only blinking for drive #0. Moved L00447 from  
drive #1 to drive #0, installed L00448 in drive #1, program was still  
running and started writing to drive #0 without any problems.

WEATHER COMMENT: Fri Mar 28 18:03:45 GMT 1997

Fog is higher and thicker now, high clouds are moving in also. Observing  
is unlikely for today so I am heading down to Hilo to work on some things.

COMMENT: Fri Mar 28 18:05:58 GMT 1997
