****MKIII PROBLEM****: Fri Jul 10 16:48:26 GMT 1998

Swapped nahenahe Exabyte drive with spare kii drive before starting up. Did a boot -r in superuser mode to try to pick up the drive.

I will test the usfdump function later with this replacement drive.

COMMENT: Fri Jul 10 16:56:20 GMT 1998

Network is still down. Ping trace indicates that problem is somewhere off the site but I cannot get to NOAA's FB server.

I can reach the mountain server.

****MKIII PROBLEM****: Fri Jul 10 18:28:12 GMT 1998

Well, drive swap worked. nahenahe Exabyte must be hosed. I will

leave spare kii drive connected to nahenahe for now. Soooo...

spare kii drive is on nahenahe, spare nahenahe drive is on LOWL

(test drive #1) and the nahenahe and LOWL drive (#1) are hosed.

System backup of nahenahe (ufsdump 0 <dir>) hard disk to tape is completed.

COMMENT: Fri Jul 10 18:39:31 GMT 1998

Network still down. I can get to NOAA at FB and off island to koa.ifa, but not to puu. dns somewhere is down, cannot get the puu host entry.
