LOW-L COMMENT: Thu Aug 27 17:06:19 GMT 1998

L00538 was popped out of drive #0 as it should have been. Removed it and cleaned the drive before installing L00540.

\*\*PSPT PROBLEM\*\* Thu Aug 27 17:07:32 GMT 1998

The camera arrived yesterday and I am ready to swap it with the bad camera.

Roy said he'll FAX instructions up to MLSO today, so far nothing has been received, will work on this as soon as I get those instructions.

COMMENT: Thu Aug 27 21:18:06 GMT 1998

Extended the dome slot.

\*\*PICS PROBLEM\*\* : Thu Aug 27 21:18:28 GMT 1998

Got delayed extendeing the dome slot because of a coolant leak problem. I found several drops of what looked like oil on the dome floor and they were directly under the dome slot transmission so I used the lift to get a look at it, there was some oil leakage so I tightened down a few loose mount bolts and wiped the trans clean. When I got back down I found the real source of the leak, there was a bad hose crimp connection at the hose-to-pipe connection point just above the PICS enclosure, coolant was slowly dripping down the pipes and onto the MKIII housing and then to the floor. The hose was probably disturbed a few days ago during an adjustment to it and the other spar cables. I tightened the crimp and cleaned up the mess. We'll probably see more drips on the floor for a few days as the excess leaked coolant drains out from the pipes behind the PICS, I left paper towels at the two critical places where the leak was and where the coolant dripped off the plumbing, that might be enough to contain the slight drainage.
