
Mauna Loa Solar Observatory Observer's Log

Thu Nov 12 16:52:27 GMT 1998

Year: 98 Doy: 316

Observer: koon

WEATHER COMMENT: Thu Nov 12 16:52:42 GMT 1998

Mostly clear sky with some passing cirrus and altocumulus, wind=10 mph from the SW, temp=44 F.

PICS PROBLEM: Thu Nov 12 17:01:33 GMT 1998

No more camera problem, the power supply was replaced yesterday and the images look fine today. I couldn't check images yesterday due to clouds.

MLSO PROBLEM: Thu Nov 12 17:06:21 GMT 1998

Network is down, can't reach anywhere outside the mountaintop.

COMMENT: Thu Nov 12 17:19:03 GMT 1998

Spar was a little top heavy in RA, I removed a small weight from the back and a larger weight from the front.

LOW-L PROBLEM: Thu Nov 12 17:46:15 GMT 1998

Program showed that time was 1 hour ahead, no images on screen, instrument was pointing ahead. Stopped observations, removed L00555 from drive #1 and installed L00557. Probably no data on L00555 since it was started yesterday when the weather was cloudy, will mail tape anyway. Cycled power to the PC, the program came up with the correct time and images were on the screen as usual.

PICS COMMENT: Thu Nov 12 20:23:44 GMT 1998

I changed the occulting disk to 1991 arcseconds diameter.

CHIP PROBLEM: Thu Nov 12 20:28:28 GMT 1998

The image was off the right side of the display screen. I checked the
01 x-axis position, it was around -5000, so I manually moved it to
around 7200 and put the Mike Controller back into Remote mode.

Thu Nov 12 20:32:10 GMT 1998 PICS Start Patrol

WEATHER COMMENT: Thu Nov 12 20:39:44 GMT 1998

Occasionally cirrus wisps are passing over.

PSPT COMMENT: Thu Nov 12 20:40:43 GMT 1998

Dome has worked well all morning without any runaways or relay chatter,
that new direction relay seems to have solved those problems.

MLSO PROBLEM: Thu Nov 12 20:44:54 GMT 1998

OK we have the network connection back up and running.

PICS PROBLEM: Thu Nov 12 20:48:46 GMT 1998

The focus of the disk images is worse than it was before it was adjusted
by Kim and David, I'm not sure about the limb images - they look pretty
good but it may be possible to improve them. Focusing is needed.

MKIV COMMENT: Thu Nov 12 21:17:04 GMT 1998

I put a blank data tape into the Nahenahe drive.

PSPT PROBLEM: Thu Nov 12 21:22:59 GMT 1998

The old "check sky conditions" message was repeatedly scrolling by on the
screen, QSUM=0 (no sunlight), telescope appeared to be pointing directly
at the sun, dust cap was open. Clouds may have passed by to cause the
initial problem but it wouldn't reacquire the sun when the sky was
clear. Haosheng, nice try but I guess your modification doesn't point

the telescope close enough to the sun after clouds to allow the guider to lock on the sun. I exited IDL and tried Restart but that just gave the same symptoms with QSUM=0. I closed the dust cap from the PC and then used Run, but it stalled trying to take the 3 test exposures (timeout counter). So I exited IDL again and tried Run again, this time it worked for a while but got stalled initializing the Focus, it couldn't clear the event and move on. I tried a Restart and the telescope started running away pointing to the West. I cycled the PC power to get the runaway to stop, then tried Run again.

PSPT PROBLEM : Thu Nov 12 22:00:32 GMT 1998

After the last try at Run the program got stalled with timeout counting like before. So I stopped for the day since orographic clouds started moving in. I had to use Obs to get to a point where I could exit, when I exited the program tried to point the telescope more to the West and hit the limit. I had to loosen the RA clutch and hand point the telescope near the stow position.

04:53 GMT 1998 CHIP End Water

Thu Nov 12 22:05:18 GMT 1998 MKIII End Patrol

WEATHER COMMENT: Thu Nov 12 22:05:41 GMT 1998

Thick orographic clouds have moved over, stopping observations.

COMMENT: Thu Nov 12 22:11:10 GMT 1998

Spar balance seemed OK, no tracking losses since the adjustment this morning. Will fine tune as time allows, need to get the GSA car in for service this afternoon.

Thu Nov 12 22:20:52 GMT 1998 CHIP CHIP End Patrol

Thu Nov 12 22:21:28 GMT 1998 CHIP CHIP Start Patrol

Thu Nov 12 22:21:50 GMT 1998 CHIP ending tape

CHIP PROBLEM : Thu Nov 12 22:22:08 GMT 1998

It won't exit, I must have clicked on End before 10 minutes after the top of the hour, if you do that it seems to lose its mind. I tried bringing up another Patrol and exiting again because that has worked for this problem in the past, it didn't work this time. I clicked on End Tape and then used Kill after the tape popped out.
