Year: 98 Doy: 349

Observer: yasukawa

WEATHER COMMENT: Tue Dec 15 18:09:43 GMT 1998

Warm, clear, no wind.

MKIV COMMENT: Tue Dec 15 18:10:00 GMT 1998

System just started up, Kitty and I were troubleshooting /local/e disk drive. Started CHIP at around 1723 UT--automatic logging has not been writing to logs as nahenahe was involved in troubleshoot. PICS did not initialize properly and I was trying to type in Cancel commands with one hand between troubleshoot tasks. I will start PICS up soon. We determined that the drive is not working. I removed it from the system, re cabled to tape drive, and we edited out local/e from /etc/vfstab file so the system won't look for it for now. I will ship faulty drive back to Boulder and CSMT will locate a replacement, format and partition it and ship it out to us.

Tue Dec 15 18:16:04 GMT 1998 PICS Start Patrol

CHIP COMMENT: Tue Dec 15 18:16:37 GMT 1998

CHIP started up at 1723 UT.

LOW-L COMMENT: Tue Dec 15 18:20:39 GMT 1998

LOWL time and date OK. It was OK each time I checked it yesterday and this morning.

\*\*PSPT PROBLEM\*\*: Tue Dec 15 18:21:25 GMT 1998

PSPT stalled initializing focus. Stopped program and went thru focus stall recovery routine from PC (it is outlined in our log notebook). Restarting PSPT.

\*\*MKIV PROBLEM\*\*: Tue Dec 15 18:26:32 GMT 1998

MKIII OK, MKIV writing streaks to KCC display. Streaks are not at random azimuths like first scan of the day. There must be a timing problem between the modulator and the transformation board.

Tue Dec 15 18:35:14 GMT 1998 MKIII Start Cal

\*\*MKIV PROBLEM\*\*: Tue Dec 15 18:37:19 GMT 1998

I can see the streaks writing somewhat linearly, but backing up over a previous streak as it scans around.

\*\*MKIV PROBLEM\*\*: Tue Dec 15 18:44:25 GMT 1998

Listened to 1/2-wave plate motor and drivetrain, no unusual sounds or indications that there is binding or a bad bearing. P+S signal at monitor looks stable.

Tue Dec 15 18:55:25 GMT 1998 MKIII Start Patrol

\*\*MKIV PROBLEM\*\*: Tue Dec 15 18:59:59 GMT 1998

Stopping to try resetting KCC.

Tue Dec 15 19:00:14 GMT 1998 PICS Flat

Tue Dec 15 19:00:53 GMT 1998 CHIP Bias

 \*\*MKIV PROBLEM\*\*: Tue Dec 15 19:06:36 GMT 1998  
 Streaking gone but no coronal image being written to display--image like a dark scan.  
 \*\*MKIV PROBLEM\*\*: Tue Dec 15 19:09:07 GMT 1998  
 OK, the KCC reset must have done the trick. Second scan looks good. No streaks, coronal image. I will repeat calibration in case that got screwed up.  
 Tue Dec 15 19:11:50 GMT 1998 MKIII Start Cal

 Tue Dec 15 19:32:00 GMT 1998 MKIII Start Patrol  
 \*\*PICS PROBLEM\*\*: Tue Dec 15 19:45:49 GMT 1998  
 Checking out shutter on PICS. Running Video mode on disc and changing exposures.  
 \*\*PICS PROBLEM\*\*: Tue Dec 15 19:47:33 GMT 1998  
 Camera image is blinking between a "nominal" exposure and a underexposed one, it doesn't go dark completely between displays. I can see what looks like partial nominal/underexp images occasionally, like a leaf shutter is caught partially in the image.

 Tue Dec 15 20:07:21 GMT 1998 CHIP End Water  
 PICS COMMENT: Tue Dec 15 20:07:42 GMT 1998  
 I may be speaking too soon, but that exercise I did with the shutter in Video mode seems to have stopped the disk image vignetting and the vertically split limb images on the Display window. I haven't seen a recurrence since doing the tests.  
 \*\*\*\* EVENT COMMENT \*\*\*\*: Tue Dec 15 20:34:19 GMT 1998  
 AP at PA 225-245 has receded back to the limb, not sure whether it erupted or not.

Tue Dec 15 21:03:49 GMT 1998 CHIP End Water  
 LOW-L COMMENT: Tue Dec 15 21:48:36 GMT 1998  
 Date and time was correct each time I checked today.  
 PICS COMMENT: Tue Dec 15 21:53:29 GMT 1998  
 Image display has been good since performing the tests earlier.  
 Disk image shows no gradient and exposure is good.  
 Limb and k-corona images on display window have been centered  
 well and not split vertically.  
 PSPT COMMENT: Tue Dec 15 21:57:58 GMT 1998  
 Packed up the thermoprinter for shipment back to Boulder since I will  
 be going to FEDEX either this afternoon or tomorrow morning to  
 ship the failed disk drive back to CSMT.
