LOW-L COMMENT: Thu Apr 29 17:45:24 GMT 1999

The program was stopped so that some software could be changed involving the CTS10 card and so a tape drive test could be made. Tape L00595 had 54 files on it, it was removed from Drive #0 and L00596 was left in drive #1, then the software was changed to allow using the CTS10 board again for setting the clock, and the program was restarted with data going to drive#1, this is a test to see if there is any problem when the tape drive change from #1 to #0 happens. There has been an occasional problem with the program crashing when the tape drive change from #0 to #1 takes place, so this is a test to see if the software causing the change is the culprit rather than the drive #1 itself. The clock test of the past few days involved removing any interaction with the CTS10 board to see if that might have been causing crash problems, during the time necessary to gather 54 files the DOS clock drifted about 1.5 seconds.

PICS COMMENT: Thu Apr 29 18:15:32 GMT 1999

K-corona data are going to tape around 1818 ut.

MKIV COMMENT: Thu Apr 29 18:28:55 GMT 1999

We have been losing MkIII and MkIV scans this morning. Not all of them have been getting transferred, including portions of the calibration. The code has been changed and another attempt at the calibration will

following.

Thu Apr 29 18:31:39 GMT 1999 MKIII Start Cal

PICS COMMENT: Thu Apr 29 18:32:55 GMT 1999

Paused to work on temperature sensors. Program hung up while pausing so had to use Kill.

MKIV COMMENT: Thu Apr 29 18:54:29 GMT 1999

Data went to disk this time. Let's hope the software permanently fixed the transfer problem.

Thu Apr 29 18:55:07 GMT 1999 MKIII Start Correct

PICS COMMENT: Thu Apr 29 19:04:55 GMT 1999

Restarting Patrol for a while, Polarizing Beam Splitter temperature sensor is now fixed.

Thu Apr 29 19:07:24 GMT 1999 MKIII End Correct

Thu Apr 29 19:07:46 GMT 1999 MKIII Start Cal

MKIV COMMENT: Thu Apr 29 19:07:54 GMT 1999

Did MkIV correct. It took three rounds to zero out the offsets.

MKIII COMMENT: Thu Apr 29 19:08:17 GMT 1999

Did MkIII correct. Dark, Light, and Gain look good on display.

Trying a new calibrate.

The flakey pixels in the 120 range are still with us. Witing for Eric to diagnose the problem.

MKIV COMMENT: Thu Apr 29 19:28:18 GMT 1999

Calibration failed again. This time with a permission denied for cortab0. This is really weird. Will try again

Thu Apr 29 21:03:07 GMT 1999 CHIP Water

CHIP PROBLEM : Thu Apr 29 21:03:23 GMT 1999

Filter temperature is low (29.995) and rising, it has been low for at least an hour.

Thu Apr 29 21:04:30 GMT 1999 PICS End Patrol

COMMENT: Thu Apr 29 21:36:37 GMT 1999

Filter temperature is within the correct range now, it may be due to the work being done on the other temperature sensors that is requiring turning off the sensor board power in the control room.

MKIV COMMENT: Thu Apr 29 21:39:40 GMT 1999

Sky is so bright the MkIV is saturating. The pB signal is washed out in the mid heights up to where sensitivity rolls off at the top.

MKIV COMMENT: Thu Apr 29 21:49:49 GMT 1999

Now just saturating at one height in MkIV. For MLSO observers this happens at a scope level of 8cm with zero set to the bottom of the scope and a gain of 0.2V.cm. This corresponds to 3cm in MkIII and a gain of .1/cm
