Mon Oct 4 16:24:40 GMT 1999

Year: 99 Doy: 277

Observer: yasukawa

WEATHER COMMENT: Mon Oct 4 16:25:59 GMT 1999

Cool, clear, light south wind.

Mon Oct 4 16:26:51 GMT 1999 CHIP Startup--Initializing new tape

MKIII COMMENT: Mon Oct 4 16:38:41 GMT 1999

>>>> The last observations with MkIII were recorded Thursday September 30, 1999. The \$data/MkIII directory on nahenahe is gone. Data transfer from the k-coronameter control computer to nahenahe is strictly MkIV and all mention of MkIII has been removed. Scanlog picks up MkIV file names.

MKIV COMMENT: Mon Oct 4 16:42:34 GMT 1999

Software changes for MkIV today. There was a digital wrap around in I and Q at really low heights, possibly below useful height, but just in case, the corrector table has been changed for so that the lowest height has 1/2 the gain of yesterday.

The corrector table now smooths over the hairline positions. This way as the hairlines drift during the day, there will not be artifacts from the correct remaining in the data. Sky transmission is picked up continuously now so that there should be fewer glitches at ends of scans.

MKIV COMMENT: Mon Oct 4 17:29:47 GMT 1999

Lost MkIV phasing this scan. Also lost it twice previously today.

This is seen as the corona going negative.

MKIV COMMENT: Mon Oct 4 18:37:50 GMT 1999

Last two coronal scans run with the guider hat removed. In real-time

there was no aparent change in "scattered light" as seen in the intensity to Q crosstalk. It is still significant at elevated height and worse in the West.

Mon Oct 4 18:40:36 GMT 1999 MKIV Start Patrol

MKIV COMMENT: Mon Oct 4 18:46:46 GMT 1999

Last pair of scans with guider hat off and with light trap removed.

It isn't much of a light trap as years of sunlight have baked off all the black anodizing.

Mon Oct 4 18:51:43 GMT 1999 MKIV Start Patrol

Mon Oct 4 19:00:28 GMT 1999 PICS polarization\_calibration

MKIV COMMENT: Mon Oct 4 19:02:17 GMT 1999

No changes made an improvement in the -Q at elevated height. Any E-W assymetry could be attributed to bright corona in the West.

MKIV COMMENT: Mon Oct 4 23:10:04 GMT 1999  
Sky is REALLY bright. Scaling of scope trace indicates >40millionths.  
There is a signature of saturation in the gif display.

WEATHER COMMENT: Mon Oct 4 23:36:42 GMT 1999  
Sky too bright, either thin cirrus or haze from down below.  
Shutting down.
