Year: 99 Doy: 334

Observer: yasukawa

WEATHER COMMENT: Tue Nov 30 16:56:40 GMT 1999

Cold, clear, light east breeze.

****LOW-L PROBLEM****: Tue Nov 30 16:57:00 GMT 1999

LOWL crashed with graphics characters printed across screen yesterday afternoon at 22:09 UT. Unloaded L00645 from drive 0, cleaned it and loaded L00647 into it. Restarted with data writing to L00646 in drive 1.

This morning found L00646 popped out, LOWL was writing to L00647 in drive 0. Unloaded L00646 and loaded L00648 into drive 1.

Tue Nov 30 17:01:37 GMT 1999 CHIP Startup--Initializing new tape

Tue Nov 30 17:09:09 GMT 1999 CHIP CHIP Start Patrol

Tue Nov 30 17:10:47 GMT 1999 MKIV Start Patrol

Tue Nov 30 17:10:54 GMT 1999 PICS Start Patrol

****CHIP PROBLEM****: Tue Nov 30 17:13:31 GMT 1999

CHIP stalled at Velocity again. May be due to header checking modification that David made a few days ago. Stalls here during first couple of patrol loops and then at the -1000, -500 step during the gain calibration started occurring just after the mods were installed. Hopefully the mods will be temporary if fixed if the checks will be permanent.

****CHIP PROBLEM****: Tue Nov 30 17:33:07 GMT 1999

May have gotten by the morning velocity stalls (3X). Patrol running OK for now.

****MKIV PROBLEM****: Tue Nov 30 17:34:11 GMT 1999

Have been fixing phasing errors as I catch them with flcStart. There have been several so far, I don't anticipate them settling down for a while yet.

Tue Nov 30 18:00:33 GMT 1999 PICS Flat

PICS COMMENT: Tue Nov 30 18:02:32 GMT 1999

Bunny Pfau installed 1/2 of the necessary patches to insure Y2K compliance onto nene this morning before start-up. Operationally, nene is running fine with the patches installed. A complete assessment cannot be made until data, both transferred over the network and written to tape, can be verified.

Tue Nov 30 18:05:29 GMT 1999 CHIP End Water

WEATHER COMMENT: Tue Nov 30 18:14:11 GMT 1999

Cirrus approaching.

WEATHER COMMENT: Tue Nov 30 18:26:57 GMT 1999

In thin cirrus.

WEATHER COMMENT: Tue Nov 30 18:34:35 GMT 1999

In thicker cirrus.

 CHIP PROBLEM: Tue Nov 30 19:34:42 GMT 1999
 Patrol had stopped at Velocity again. This time it may have been because I grabbed the wrong mouse and did a right click which opened up a menu window on kii's desktop. I was intending to right-click the YCC monitor. I discovered the window open and closed it before attempting to do a Cancel Wait. Closing window caused the patrol program to resume.
 Tue Nov 30 20:03:00 GMT 1999 CHIP Gain
 CHIP PROBLEM: Tue Nov 30 20:08:56 GMT 1999
 OK, just finished gain cal, finished -1000, -500 step and patrol stalled as expected. Fixing with Cancel WaitTape.
 CHIP PROBLEM: Tue Nov 30 20:11:23 GMT 1999
 First attempt did not work, got the same resource unavailable message. Maybe I should wait a bit???? does the header check take a while??? Will try another Cancel Wait after a more patient wait, maybe the drive really IS busy.
 Tue Nov 30 20:16:41 GMT 1999 CHIP End Gain
 Tue Nov 30 20:16:52 GMT 1999 CHIP Bias
 CHIP PROBLEM: Tue Nov 30 20:17:08 GMT 1999
 8 minutes should be long enough. Cancelled Wait and program continued.
 **** EVENT COMMENT ****: Tue Nov 30 20:28:14 GMT 1999
 Large, erupting filament near mid-disk.
