Stalled again with Program: FixCenter. I did Cancel Wait to clear it. The only "wait" process I could find during both stalls was "WaitTape".

Cirrus passing by.

PSPT PROBLEM: Wed Dec 8 19:01:00 GMT 1999

The dec axis was at a limit when pointing at the sun. While it was pointed I moved the dec limit switch sector to clear limit signal plus about 2 more degrees, then I did an ephmcal and restarted observations. Data are being taken OK now.

WEATHER COMMENT: Wed Dec 8 20:02:50 GMT 1999

Thick cirrus passing over now and then.

MKIV PROBLEM: Wed Dec 8 20:03:26 GMT 1999

The akamai window was frozen, I couldn't type in flcStart, so I Idled the scans and reset akamai.

MKIV PROBLEM: Wed Dec 8 20:16:47 GMT 1999

The first reset didn't help, the second reset of akamai caused Nahenahe to reboot. I restarted everything and now the akamai window works OK.

CHIP PROBLEM: Wed Dec 8 20:19:39 GMT 1999

Used "Cancel Wait" to clear the 2000 ut usual stall.
