****CHIP PROBLEM****: Wed Mar 1 18:17:09 GMT 2000

A new variation on our data write problems, I see the same tape I/O error messages on the screen but the program hasn't stalled, I guess this is progress.

COMMENT: Wed Mar 1 18:19:27 GMT 2000

I don't know if it is a problem but the colors for the CHIP and PICS GUI monitor have turned purplish, reason unknown.

COMMENT: Wed Mar 1 18:23:04 GMT 2000

****CHIP PROBLEM****: Wed Mar 1 18:37:43 GMT 2000

Stopped Patrol using End, removed tape C01059 and the old 8505 exabyte drive, installed old spare TTI 8501 drive again (with DIP switches set correctly), installed tape C01060, restarted Patrol.

****CHIP PROBLEM****: Wed Mar 1 18:44:36 GMT 2000

Stalled with Tape:rewind0, tape drive not doing anything despite doing stuff when I used the New Tape command. Will try to start over again.

****CHIP PROBLEM****: Wed Mar 1 18:47:12 GMT 2000

No control of Console window and now no control of xterm too.

****CHIP PROBLEM****: Wed Mar 1 19:09:44 GMT 2000

I had to reset Kii to get things going again. Now it appears that Patrol is working and data are going to the "new" spare tape drive.

Doing a data disk for the scintillometer, need to use 2 disks due to filename conventions and multiple files with the same name after I fixed the timing problem we had earlier this month.
