CHIP/PICS GUI monitor has purplish tint again, like yesterday morning.

**PICS PROBLEM**: Thu Mar  2 18:22:39 GMT 2000
The disk and limb images are being displayed high up in the Display window
although they are centered in the Camera window.  Won't try to repoint the
objective because it looks like a software problem.  It affects all the
disk images but only the first limb image in the sequences.
