CME from around 1802 UT in northeast.

Did not see it because I am struggling with removing faulty CHIP monitor that has a flaky power saver switch that keeps kicking on. Have not been able to get it to stay on today.

PICS PROBLEM: Tue Apr 11 18:56:28 GMT 2000

PICS crashed when my knee switched the power controller under the CHIP monitor console from remote to off to local.

CHIP PROBLEM: Tue Apr 11 18:57:35 GMT 2000

Probably crashed CHIP too, but still struggling to remove broken monitor -- doesn't fit thru access spaces, having to move shelves around.

CHIP PROBLEM: Tue Apr 11 19:08:43 GMT 2000

CHIP monitor replaced with spare. Rebooting CHIP.

PICS PROBLEM: Tue Apr 11 19:09:16 GMT 2000

 **** EVENT COMMENT ****: Tue Apr 11 20:35:50 GMT 2000
 There are some very large but subtle changes in the corona in the southwest
 from around 2000 UT.
 PSPT PROBLEM : Tue Apr 11 21:21:41 GMT 2000
 PSPT PROBLEM : Tue Apr 11 21:22:34 GMT 2000
 Rebooted and started PSPT again, but it crashed again. Randy is checking
 into the problem. We will not reboot until tomorrow.
 Opened another xterm window to start tape transfer
 using manual commands. This is working.
 PSPT PROBLEM : Tue Apr 11 21:36:39 GMT 2000
 Tried 'Obs" from second xterm to shut down the PSPT. First thing it tried to
 do was start the CCD. I got the following message on both xterms:
 "Message from syslogd@pspt.mtn.hawaii.gov at Tue Apr 11 21:32:45 2000
 pspt.mtn.hawaii.gov pm[8051] camera data semaphore error"
 I exited the xterm and opened another and tried Obs again, this time
 it worked and I "exit"ed the program and closed down the PSPT for the day.
 Original xterm is still unresponsive.
