LOW-L PROBLEM : Sat Jun 3 16:51:41 GMT 2000

"Tape Header" crash yesterday, drive is apparently not working any differently in its new #1 position. Removed L00719, only has 2 files on it. Labeled drive #1 as bad. We can just use the current drive #0, we have to stop the program when we get 70+ files on tape anyway (to change tapes), so now we can restart the program with a new tape in the same drive. Data going to L00720 in drive #0.
