MCC works OK now, David fixed some code.  The images look unusual, but that
could be due to the clouds.

CHIP COMMENT: Wed Feb  7 19:27:47 GMT 2001
I added hoike to the /etc/hosts file on the new kii computer.
**CHIP PROBLEM**: Wed Feb  7 19:55:27 GMT 2001
The Display image still looks bad at any Display Gain even though the clouds
are thin enough that the image should be looking good.  I can only see an
image in Screen Buffer 0, buffers 1 through 3 give only a blank white
Display window.  There is that dark band running horizontally from the bottom
of the Display window up to tangent with the South solar limb and across the
entire window width too.  That band isn't visible in the Camera window images.

**CHIP PROBLEM**: Wed Feb  7 21:12:36 GMT 2001
Stopped Patrol, doing a Kill/Run cycle to load some new changes David made.
**CHIP PROBLEM**: Wed Feb  7 21:17:27 GMT 2001
The funny horizontal band that was at the bottom of the Display window is
now gone, since the Kill/Run induced change.

**MKIV PROBLEM**: Wed Feb  7 22:11:23 GMT 2001
There is a huge clouds blocking the sun as I am trying to see if the Display
image looks better, unfortunate timing.
**CHIP PROBLEM**: Wed Feb  7 22:21:01 GMT 2001
The last 2 time I ran the "Kill" command I had to manually kill the Display
task after the others were automatically killed.
