MKIV PROBLEM : Wed Jun 27 17:31:56 GMT 2001

It looks like East and West are reversed on the scan images and animations when compared to where prominences are visible on the other instruments.

Mk4 images show the big prominence on the West, especially visible in the realtime scans, but the prominences are on the East side today.

Wed Jun 27 17:46:13 GMT 2001 PICS End Patrol

PICS COMMENT: Wed Jun 27 17:46:26 GMT 2001

Pausing to change the occulting disk.

Wed Jun 27 17:54:02 GMT 2001 PICS Start Patrol

PICS COMMENT: Wed Jun 27 18:00:07 GMT 2001

I changed the occulting disk from 1981" to 1961".

COMMENT: Wed Jun 27 18:06:08 GMT 2001

I'm bumping the Spar a lot as I check out the Mk4 image orientation.

MKIV PROBLEM : Wed Jun 27 18:25:29 GMT 2001

It looks like the image orientation is OK, not reversed like I thought it might be. I offset the Mk4 telescope East so the occulting spill would be on the West side, then I looked for a brighter West side in the scan - it was brighter and the East side of the scan was darker. I recentered occulting by reconnecting the cable (I didn't change any guiding telescope adjustment for this test), then the scan got darker in the West and brighter in the East.

This is a weird coincidence, I can see prominence structure on the West in scans that match the shape of an EPL on the East side. There is

a small prominence on the West side that coincides with the location of the bright structured streamer. The animation shows no structure in the streamer but the realtime scans look very good.

**** EVENT COMMENT ****: Wed Jun 27 18:44:13 GMT 2001

That AR on the West limb is very active, possibly flaring, EPL in progress. PA=290.
