Tried disconnecting Barrel angle cable at OCP, GUI readout still bad, reconnected cable. Likewise with cable to transformation board. Also the 5 vdc power supply read 3.9 vdc in all 3 configurations.

PSPT COMMENT: Wed Dec 19 19:59:04 GMT 2001

Stopped regular observations to test Alices new software mods. Will restart and run for one hour with those, then go back to old code. I am ending the observations like an end of day, complete shutdown between each switchover.

\*\*MKIV PROBLEM\*\* Wed Dec 19 21:18:05 GMT 2001

I'm getting data, several scans now. The 5 vdc branch of the power supply that Eric suspected was indeed the problem. I connected a power supply in parallel to that branch and the barrel angle displays came back. The extra power supply is putting out about 0.35 amps to boost the bad power supply.

\*\*MKIV PROBLEM\*\* Wed Dec 19 21:42:19 GMT 2001

Oops, I bumped the power supply leads and they came off during the cal, I'll repeat the cal when this one ends.
