PSPT PROBLEM: Tue Jan 15 18:14:35 GMT 2002

Images were not centered when I checked so I aborted observing program and started the Center Image routine. Centering failed due to what looked like active mirror oscillations (out of focus "ringworm" features where active regions reside). Image looked well centered, otherwise, so I restarted Daily Observations.

**** EVENT COMMENT ****: Tue Jan 15 18:29:57 GMT 2002

CME at PA 230-260, possibly starting before 1741 when west limb began clearing the dome wall.

PSPT PROBLEM: Tue Jan 15 18:35:57 GMT 2002

Image discovered off center again. aborted and restarted.

Both times sun was in northwest corner of display.

Centering within Daily Obs routine proceeded without the oscillations this time.
