PSPT COMMENT: Fri Jun 14 16:38:22 GMT 2002

Starting observations with Alice's latest software mods to RA/DEC routines.

PSPT PROBLEM: Fri Jun 14 16:43:12 GMT 2002

Original startup, before Alice loaded her software change, did not correctly point to sun. Pointed lower than sun's location. Loosened RA and moved spar to close proximity of sun manually.

PSPT PROBLEM: Fri Jun 14 16:59:24 GMT 2002

PSPT compensated for earlier mispoint after I manually moved spar. It was mispointed in the other direction. I manually pointed spar again.

WEATHER COMMENT: Fri Jun 14 17:00:26 GMT 2002

In thin cirrus, sky very bright around sun.

PSPT PROBLEM: Fri Jun 14 19:51:18 GMT 2002

PSPT ran away at 1921 UT and pointed low in the east due to Alice's mods.

I was on the phone with Kim at the time so did not catch it right away.

Killed RunPspt.pro and restarted Pspt to pick up old program that

Alice reloaded into the system. Pointed spar manually and restarted

Daily Obs.

COMMENT: Fri Jun 14 19:53:59 GMT 2002

Reconfiguring dome shutter.

PSPT PROBLEM: Fri Jun 14 20:00:48 GMT 2002

Manually repointing spar did not work, apparently spar knew where it was or something and over corrected in the opposite direction. May have gone

to the correct elevation if I had left it where it was. Program crashed so I will manually move dome and spar to shutdown positions, initialize, then restart-up.

WEATHER COMMENT: Fri Jun 14 20:09:08 GMT 2002

WEATHER COMMENT: Fri Jun 14 20:09:17 GMT 2002

In pretty extensive cirrostratus of varying thickness.

MKIV COMMENT: Fri Jun 14 20:09:58 GMT 2002

Will not restart mk4, no really useable mk4 data today, maybe a couple of marginal images.
