PSPT PROBLEM:
Fri Jan 3 17:54:23 GMT 2003
Pstp would not start-up this morning. Discovered that powerstrip was left on overnight so I turned it off this morning as I "turned things on" this morning. PSPT OK after turning Pspt on, killing runPspt.pro, and restarting.
PSPT COMMENT: Fri Jan 3 17:59:55 GMT 2003

****PICS PROBLEM****: Fri Jan 3 23:55:37 GMT 2003

PICS was slightly domed out. Same problem seen by Allen yesterday. Moved the ADR sensor to a better location to avoid being in sunlight while the edge of the PICS aperature gets shaded by the dome in the afternoons. May need to tweek the position a few iterations before an ideal location is found.

Sat Jan 4 00:04:20 GMT 2003 PICS polarization_calibration

****PICS PROBLEM****: Sat Jan 4 00:35:49 GMT 2003

Possible crash... PICS started polarization calibration at 00:04 UT. It is now 00:34 UT. I just noticed that the program appears to be at Accumulate 3->3 for a while now. If this doesn't change in the next few minutes, I'll assume that PICS is crashed and I will attempt a restart.

****PICS PROBLEM****: Sat Jan 4 00:56:17 GMT 2003

Cancelled and killed all processes after trying to do a few cancel waits to attempt to get the picscal to resume with no success.

Restarting.

Sat Jan 4 00:58:07 GMT 2003 PICS Start Patrol

****PSPT PROBLEM****: Sat Jan 4 01:33:00 GMT 2003

Pspt stalled at 01:10 UT at "mlso_web_img making jpeg images"

Killed runPspt.pro and restarted observations.

MKIV COMMENT: Sat Jan 4 01:40:22 GMT 2003

Centered O1, N-S stepper stopped very close to opposite limit (as morning).

COMMENT: Sat Jan 4 02:14:59 GMT 2003

Just gave a tour to about 12 French tourists (Aventure et Volcans) that I found wandering around the site--a couple of them could speak some english so I think the group understood what we were doing up here.

****PSPT PROBLEM****: Sat Jan 4 02:19:05 GMT 2003

PSPT dome ephemeris needs some tweeking for the long observing days.

The dome azimuth is ahead of where the sun should be, the PSPT is looking at the right side of the slot with approximately 1/2 of the aperture shaded by the dome.

COMMENT: Sat Jan 4 02:30:08 GMT 2003

Losing guiding. Probably a declination reset. Shutting down for the day.
