Wed Mar 19 16:59:17 GMT 2003 CHIP Start Patrol

WEATHER COMMENT: Wed Mar 19 16:59:16 GMT 2003

Cool, clear, southeast wind. Some scattered cirrus.

**** EVENT COMMENT ****: Wed Mar 19 17:11:12 GMT 2003

Active region on solar disk near west limb/equator.

PSPT COMMENT: Wed Mar 19 17:12:29 GMT 2003

Observing.

Wed Mar 19 17:19:14 GMT 2003 MKIV Start Patrol

MKIV COMMENT: Wed Mar 19 17:19:19 GMT 2003

O1 centering preset.

A NEW TAPE HAS BEEN PUT INTO KAIEE DLT DRIVE, Wed Mar 19 17:19:47 GMT 2003

MKIV COMMENT: Wed Mar 19 17:22:18 GMT 2003

Centered O1.

MKIV COMMENT: Wed Mar 19 17:35:59 GMT 2003

Experiencing barrel problems. Have not seen what is happening except that akamai messaging barrel glitches and displays have no data.

MKIV PROBLEM: Wed Mar 19 17:37:42 GMT 2003

Barrel behaving last scan.

Centered O1.
MKIV PROBLEM: Thu Mar 20 01:39:30 GMT 2003
While watching cables inside wrapup for binding, I observed the barrel
stutter. I watched as the drive stepper motor ran forward, stop, then
run backward for two or three rotations
(stepper motor makes many rotations for each rotation
of the barrel) and then resume going forward again thru the course
of a barrel rotation (the stutter) and
could feel the increase in vibration before the motor backed up each time
indicating possible binding somewhere. I'm not really aware if the
drive circuit has logic that causes the stepper to back off and try
again if it encounters binding before it reaches the programmed limits.
This is what it appears to be doing. It doesn't appear to be a slipping
clutch. I inspected the bearings near the drive gears and did not see
any broken bearings (occurred once in 1990) but there was a curious
accumulation of "stuff" (grease and grit?) against one of the ball bearings
on bearing #3. Maybe Darryl can further inspect the bearings.
Motor drive logic just sends pulses to the STM101 card to run the motor
until the barrel angle matches the set turnaround points. The pulses
stop and then the logic tells the barrel to go in the other direction.
One possible cause of the stutter is if the barrel angle information
somehow gets corrupted, telling the barrel to go the other way, but
then, what tells the logic to go back in the correct direction again??
Thu Mar 20 02:33:55 GMT 2003 CHIP End Patrol
Thu Mar 20 02:34:34 GMT 2003 PICS End Patrol
PSPT COMMENT: Thu Mar 20 02:34:43 GMT 2003

Shut down PSPT. PC crashed during shutdown so I rebooted it and repeated shutdown.

Thu Mar 20 02:38:16 GMT 2003 MKIV End Patrol

MKIV PROBLEM : Thu Mar 20 02:37:59 GMT 2003

Spar went off in declination during last quarter rotation of the last scan.

COMMENT: Thu Mar 20 02:42:44 GMT 2003

Looks like there was a normal declination reset at the end of the observations.

Thu Mar 20 02:43:32 GMT 2003
