    No image on display. Restarted echosys but that did not work. Changed
    Dec error to use from 0.19 to 0.32 as suggested in a previous email
    from Alice but that did not bring image onto display either. HA error
    to use is -1.25 .

    Sighting over the top of the heliostat head, I can see a gap between the top and the sun. Guide head may be pointing a few degrees low. Cannot adjust any continuing slip between the compumotor and the guide head until we
    develop a way to remove the broken set screw.

    HA slipped a bit more. Changed the "HA error to use" value from -1.25 to -2.20 before the image was pulled close enough for the quad cells to take over pulling the image onto the display and center it.
