GONG PROBLEM : Thu Jan 15 19:07:34 GMT 2004

mlgong-x terminal wasn't connecting to workstation in shelter so we wouldn't get a display of the parameters. The screen would show the error message "Host IP address timeout". Cycling the power to the network hub in the shelter solved the problem.

Dec axis reset. Repointed spar.

PSPT PROBLEM : Thu Jan 15 21:26:48 GMT 2004

Randy sent bad images that have been getting into data in the last few days. Watching inside telescope during data collection showed that sometimes the Uniblitz shutter was sticking on exposures, that accounts for the unevenly exposed images, they were brighter on the left side. Replaced the shutter, need to remove 2 side screws on mount to allow unscrewing the shutter after disconnecting the electrical connector. Will send bad shutter for repair

and/or get another replacement.
