Still cleaning up and tidying things after the COR1 project visit. I packed one of the 3 boxes that need to be sent back to Boulder soon, I packed it according to the photos but it looks like it can hold more things. I left it uncovered with the crate screws bundled and taped to the outside of the cover. I've been taping screws and bolts to their parts whenever possible, using clear packing tape. I also boxed some electronic components, the boxes that are closed (interleaved flaps) are filled already. Packaged some of the bolts. I wedged the leftover bubble wrap between the crate and the cover

on the outside of the crate. I will be able to lift and place the heavy yoke by myself, and the spar feels easy to manage, so we won't need 2 people to pack the crates but all 3 of us should be up here for loading the crates into the truck or van later.
