PSPT COMMENT: Thu Apr 15 22:13:20 GMT 2004

Pausing to attach UG5 and IR prefilters to the lightpath snout inside the PSPT just past the beamsplitter.

PSPT COMMENT: Thu Apr 15 22:58:17 GMT 2004

After installing the prefilters by taping them over the tube in the PSPT just past the beamsplitter I took a set manual images. I tried to get a few good images at each filter position, I had to increase the exposure times since the filters are so dark. I couldn't let it run in automatic observing mode because the images would be too dark and it couldn't center the image either. Bad pixels became apparent on Blue and Red images, I didn't get a Red image

since the exposure was already at 2000 and the bad pixels were really bad.
I could get some decent images though slightly out of focus for the CaK
filter positions. I removed the prefilters and went back to normal
automated obs.
