****ECHO PROBLEM****: Wed Apr 28 20:04:30 GMT 2004

ECHO is observing again.

Tests using SX control, moving HA in at first small steps then in larger steps indicated that the motor and encoder was not broken. Restarted echosys program but HA did not move from the test position which was around 49 degrees (still west, but higher elevation). Moved HA to 1000 steps, near zenith, and turret moved to almost straight up, paused, and then moved to correct HA. Restarted echosys and started taking data. Guider acquired sun and centered image within 3 cycles.

WEATHER COMMENT: Wed Apr 28 21:53:01 GMT 2004

Wind shifted quite suddenly and heavy clouds moved over station from the northeast. Clouds were quite low and wind shift would also bring up deisel exhaust and fine dust from the earth moving. Closed domes immediately. Pausing instruments.
