ECHO PROBLEM: Mon Aug 9 02:20:31 GMT 2004

A strange problem occurred but I fixed it. I noticed that the GUI monitor was dark and the power LED was flashing, no computer LEDs were lit so it was as if someone turned off the PC, I touched the PC cabinet near the top were the power switch is and it turned back on without me touching the power button, maybe it was due to a static discharge though I didn't feel one, anyway the PC came on and I logged in and restarted the GPS program and observing program.
