PSPT PROBLEM: Wed Aug 18 18:00:22 GMT 2004

PSPT was still stalling. Dec motor drive was stalling. Dec was really tight. I loosened and retightened Dec bolt, initialized dome and spar manually to re-Startup. Re-initialized PC and ran Startup. Startup went thru its routine OK except that the dome motor kept jumping the track and dome did not end up in the correct position. Moved it manually and did a dome cal / dome ephm. Restarted observations.

PSPT PROBLEM : Wed Aug 18 18:31:14 GMT 2004

Spar is pointing at around 2100 UT height. Aborted. Will attempt more stuff to try to overcome the ephemeris problems that have been plaguing the PSPT this morning.

PSPT PROBLEM : Wed Aug 18 18:39:44 GMT 2004

Shutdown. Spar parked to west of nominal position, approx. 20 degrees away, dome parked about the same azimuth, to the west.

Checked out dome azimuth drive. Drive runs smoothly in both directions when done manually. I don't know why it skips when running under the ephemeris program. Pointed spar and dome to nominal park positions. Initialized system on PC. Re-Starting up again.

PSPT PROBLEM : Wed Aug 18 19:00:42 GMT 2004

After startup finished, dome was too far east. Moved dome with dome goto command and did a dome cal and dome ephm. Restarted observations.
