ECHO PROBLEM: Tue Aug 24 20:47:28 GMT 2004

The lower image on the display is extremely faint, the upper image on that PC GUI display monitor looks good. MOF2 field is Red with a value of 145, the MOF1 field is green with a value of 143.

PSPT PROBLEM: Tue Aug 24 20:49:50 GMT 2004

The instrument isn't being operated while I try to fix a dome azimuth drive problem, more details are in the log from 2 days ago.

ECHO PROBLEM: Tue Aug 24 21:18:46 GMT 2004

I did a Partial Power Down sequence and brought the instrument and PC back up and restarted observations but the same faint lower image and Red MOF2 field still exist as displayed by the PC GUI monitor.

WEATHER COMMENT: Tue Aug 24 21:36:03 GMT 2004

Getting some low clouds.

MKIV COMMENT: Tue Aug 24 21:36:26 GMT 2004

Centered occulting.

Tue Aug 24 22:29:56 GMT 2004 CHIP End Patrol
Tue Aug 24 22:31:31 GMT 2004 PICS End Patrol

WEATHER COMMENT: Tue Aug 24 22:30:19 GMT 2004

Fairly cloudy, pausing instruments, closing dome due to possibility of fog.

PSPT PROBLEM Wed Aug 25 01:55:15 GMT 2004

I was unsuccessful at reshaping the roller ring, I loosened all the top plate bolts and roller ring overlap connecting bolts and tried to pry it into a shape that is smaller in diameter from the ESE to the WSW where the dome touches and gets next closest to the roller ring. Next I reversed a 4 bolt mount at the ESE location to get that roller to push out on the dome more, I'll do another on Thursday. Then we're going to try using a dremel tool to slot the 4 bolt holes on each of 2 to 4 roller mounts on the WSW side, the slots will be continuations of the existing bolt hole going 3/16" toward the outer side of the mounts, that will let the mounts sit in toward the center of the dome more which should relieve some force pushing the dome outward at that WSW area - and that may relieve some force pulling inward at the ESE area where the dome currently makes contact with the roller ring seam cover. While comparing the main bigger dome to the PSPT dome I can see where rain water may be directed down behind some loose aluminum exterior sheathing; screwing in the sheathing all around the top of the main circular dome wall by reaching out through the dome slot could cure the rain leak problems.
