PSPT PROBLEM Tue Feb 15 01:27:39 GMT 2005

Crashed at 0116 UT at (3/3) Taking Cak image. Killed and restarted.

____end____

PICS PROBLEM Tue Feb 15 01:55:16 GMT 2005

Timing problems with H-alpha.disk program started occurring from 0150 UT.

I do not see anything strange about the console messages, but then I don't know what a correct nmessage would display. Need to write a few of them down.

____end____

PICS PROBLEM Tue Feb 15 02:06:13 GMT 2005

Messages on console during the H-alpha.disk interval appear to differ

in the two values that appear when the image is taken, after the optics setup. In the case where the optics are in the correct positions, the numbers are like: 379 369[1] 10040

In the case where they were not in the correct positions the numbers were like: 78 75[1] 13815
or: 6 377[1] 12281

The two numbers were low... single or double digits and when the optics were in place, the two numbers were in the 300-400 range.

What are the significance of these values?
