When I try to adjust by pushing on spar while observing, the instrument self corrects. Could be that the active mirror system is out of adjustment. end **GONG PROBLEM**: Wed Jun 1 20:03:28 GMT 2005 Going down to GONG to reset their instrument. There is a problem with the camera rotator since this morning. I need to get out of this control room and clear my brain. Hopefully, I will return with a few fresh ideas about the PSPT. end **GONG PROBLEM**: Wed Jun 1 20:25:33 GMT 2005 Back from GONG. Camera rotator is not energized. Darryl struggled with the problem until way past pau-hana time yesterday after logs were closed for the day.

Will leave it for the GONG crash crew. They plan to arrive on site tomorrow. end **PSPT PROBLEM**: Wed Jun 1 20:27:30 GMT 2005 Centering between observing subroutines moved pointing off sun. Manually pointed it. end **PSPT PROBLEM**: Wed Jun 1 21:41:27 GMT 2005 Problem may be in Dec drive or clutch. Shut down pspt and spar stowed at correct RA but did not move for the Dec. Clutch screw was secure. Loaded Alice's modified Dome.c program into PSPT's PC. Compiled pspt.exe. Previous Dome.c version in \050601 subdirectory. ____end_ COMMENT: Wed Jun 1 22:20:54 GMT 2005 I think I am coming down with something--hopefully a 24-hour something.
