PSPT PROBLEM : Thu May 25 18:06:44 GMT 2006

After problems with pspt shutdown yesterday Alice suggested that pspt.ini on the PC was corrupted. I had already done startup on pspt and to be safe did a shutdown before copying and older version to pspt.ini. Upon restarting everything seemed OK except that the initial blue image was dim. The poor image was caused by the cap being closed. The cap is now not responding to the cap open/close command from the PC. I tried cycling power to the PC but the cap still does not open. Investigating further.

COMMENT: Thu May 25 20:59:16 GMT 2006

Reconfigured dom shutter about 1930UT.

____end____

PSPT PROBLEM : Thu May 25 21:00:11 GMT 2006

The pspt PC power supply has failed. It is one of the older "AT" style supplies about 3"x6"x6". I will email boulder and have them find another and have it

shipped to us.
