**MKIV PROBLEM**: Tue Feb 10 17:41:13 GMT 2009
Connected the cables for the new camera which is in place and ready for
alignment. Will need to wait until I can reach the camera before aligning.
end

WEATHER COMMENT: Tue Feb 10 20:38:53 GMT 2009
Getting cloudy.
end
**MKIV PROBLEM**: Tue Feb 10 20:39:06 GMT 2009
Pausing work on camera alignment due to clouds. I can see a light signal
when the sun is behind clouds that decreases or increases when I block the
light path just before the Schneider lens, that's a good sign that the camera
is working.
  end
WEATHER COMMENT: Tue Feb 10 21:02:41 GMT 2009
Thick dark clouds, pausing instruments and closing domes.
end

                                       End Patrol
**MKIV PROBLEM**: Tue Feb 10 23:07:32 GMT 2009
New camera is removed again, I checked the LVAL Pretrigger seeting to verify it is set to 0 like the old camera, it is. T
here is another rubber-plugged hole
in the side of the camera box that has another 16-position dial in it, the
old camera was set to 0, the new camera is set to 8. 8 is the exact
opposite side of the dial so I'm wondering if this was set there by mistake
```

or if it was a factory setting. I sent out info to see if anyone at HAO or Kim or David know anything about this setting. If not then I'm inclined to leave it alone then re-install and try to align the camera.
