GENERAL PROBLEM COMMENT BY BEN: Sat Apr 17 00:48:08 GMT 2010

The spar guiding is off (and has been since about 9am) this morning.

This leads the CHIP and H-ALPHA images to be poorly centered on the array. I am not sure if MkIV is effectd because the sky has remained to cloudy to get a signal from the coronagraph.

The spar looks like it should be pointed in the right direction, the image of the sun falls in the nonimal spot on the ground glass, and the guide telescope appears to have not moved.
