COMP COMMENT BY DARRYL: Tue Nov 9 17:19:44 GMT 2010

The last focus curve from yesterday looks good. This curve has been looking kind of poor for at least 3 days in the first morning focus run, maybe due to a bright sky or dirty O1. The first run this morning also looks less than optimal with several peaks, that is before I centered the occulter, the occulter is not far off this morning - a good sign that my shimmiing of the O1 assembly on Sunday afternoon has improved the occulting by holding the O1 fixed better (it was probably moving a little through the day before that. I centered the occulter and then ran focus again, it looks great this time, we need to center the occulter before focusing the instrument. I rechecked the occulting and it still looks good. The sky is bright today.

PSPT PROBLEM COMMENT BY DARRYL: Tue Nov 9 17:46:40 GMT 2010

No image of sun after initialization, clutches are tight, time is correct, pointing looks close judging from light on optics inside PSPT. Ran "gdr ephmcal" to recalibrate new pointing offsets.
