GENERAL PROBLEM COMMENT BY ALLEN:
Thu Dec 23 20:10:45 GMT 2010

Also power went down last night. The fuse in the new power protection circuit blew again so the power to mlso stayed down after the powerline returned to normal. The power was then down long enough that the ups batteries were depleted and power to the sun workstations went down. I have everything started up again but Kenobi didn't boot correctly, it appears there is something wrong with the external usb drive again. Kenobi is up, as I used the cntrl-D option to get around the weird usb drive, but it needs attention. Everything else seems OK, but as its cloudy and I'm not running observations its difficult to know for certain.
