CoMP COMMENT BY DARRYL: Sun Jan 2 18:46:24 GMT 2011

Camera shutoff due to temperature, filled dewar several times this morning and now temperature is good again, camera is back on and temperature monitoring program is on too. We need to be sure to fill the dewar as much as possible as late in our day as possible to keep camera on and make startup as fast as possible for the next observing day in case a day is missed in between.
