**\*\*H-ALPHA PROBLEM COMMENT BY BEN\*\***: Wed Jun 15 17:10:27 GMT 2011

H-alpha PC seems to be dead.

The Power LED on the front of the case is slowing blinking.

About 1/2 the time the power on button is pressed the process fan spins about 1/4 a turn then stops.

No beeps or any other indicators of activity.

H-ALPHA COMMENT BY BEN: Wed Jun 15 21:04:38 GMT 2011

The video card in the H-alpha computer died. The fan is trashed. We are however able observe with the machine by connecti  
ng to it over the network and running it headless.
