PSPT PROBLEM COMMENT BY BEN : Mon Jun 20 19:34:00 GMT 2011

Friday afternoon the lower shutter was not completely closed; such that the upper shutter was forced stopped by the rain guard about 1. before hitting the motor switch. By the time this was discovered after the daily log was submitted the drive motor had over heated and apparently burned out. It appears there was no damage to the rest of the shutter drive train; and we are able to manually open and close. Before leaving on Friday the dome was secured with both shutters closed and note was left for the weekend observers. We do not appear to have spare motor at the observatory but they are available commercially and tomorrow I will take the motor into a local repair shop (I believe this is the one we used in 2003 the last time this happened) to get an estimate on repairs.
