GONG COMMENT BY DARRYL: Sun Mar 18 18:12:27 GMT 2012

Back from shelter, unstowed turret, turret started oscillating in pitch immediately upon startup, couldn't damp it by hand, eventually it started pointing better.

Sun Mar 18 21:21:09 GMT 2012 MKIV Start Cal MKIV COMMENT BY DARRYL: Sun Mar 18 21:21:17 GMT 2012

Finished cleaning 01, reinstalled, doing the "after" cal that needs to be done when we clean the O1, then will proceed with obs.

end

COMP COMMENT BY DARRYL: Sun Mar 18 21:22:12 GMT 2012

Finished cleaning O1, will restart obs.

Crashed, restarted.
end
**MKIV PROBLEM COMMENT BY DARRYL**: Sun Mar 18 23:54:48 GMT 2012
Scans stopped at end of scan a while back and I had trouble getting it going
again. It looks like it stalled right after the 2nd cal finished, I had
Patrol queued up but it didn't start, then I got busy with other stuff
and didn't notice, the mouse control wasn't working on the realtime GUI
when I tried to move the cursor around and click on buttons.
What eventually worked was the combination of turning off the main
KCC power and reseating the Vigra video board to see the realtime display
again. This old Mk4 sure is being difficult, we don't have a spare Vigra
board and can't find spares anywhere, we could probably use the CHIP Vigra
board but that would mean losing the CHIP GUI screen at the least, though we
really don't use that for anything, then there is probably linked code that
looks to see if that board is running OK, but I'm not sure if we really need
the CHIP Vigra board to get CHIP data, we may have to find out, if we want to
keep the mk4 running without frequent checking and troubleshooting from MLSO
workers.

**GONG PROBLEM COMMENT BY DARRYL**: Mon Mar 19 00:50:10 GMT 2012
It's 58F outside and the turret is oscillating more than any other time today,
it doesn't seem like the oscillation is caused by cold temperatures.
end
Mon Mar 19 01:13:28 GMT 2012
                                         End Patrol

**GONG PROBLEM COMMENT BY DARRYL**: Mon Mar 19 00:53:00 GMT 2012
Lightfeed ADC121 is at 1.85 and outside normal operating range, shortly
thereafter it is back in normal range. That reading jumps 0.4 or more each
readout, which is a lot more than any of the other measured values. The
```

end

temperature is warm so cold isn't causing the oscillations, they've been happening for about 2 hours in this warm weather. The wind is at about 20 mph from the SSE, maybe that's a factor, it's been windy for many weeks. As I leave today I will go through a stow/unstow cycle on the turret to try to stop the oscillations. I'm not going to cover the turret and heat it with a lightbulb tonight, that's been happening this week as a thermal test. If the GONG guys want us to continue then we can, but I think we should stop because it is not helping and they have enough test data.
