GONG PROBLEM COMMENT BY DARRYL : Tue Mar 20 18:21:30 GMT 2012

So far there haven't been any instabilities with the pointing since the guider card was swapped yesterday. It looks like the ADC121 (Pitch Amp) was driving poorly (Roll Amp too probably) due to bad electronics, and maybe the high winds would push the guiding unstable due to the extra driving force. Time will tell.

WEATHER COMMENT: Wed Mar 21 00:29:48 GMT 2012
Foggy.

____end____

NOTE BY DARRYL: Wed Mar 21 00:29:57 GMT 2012

NOAA installed a media converter between unused FO cables and our network that will allow the "Exploratorium" folks to broadcast a webcast through our data network during the Venus Transit on 6/5. We just need to connect the dangling yellow cable near our network switch to complete the connection. I've sent out an email to give and receive information about this connection and how it will affect our network traffic. NOAA says Russ Schnell asked permission from HAO, this is the first I've heard about it other than a few emails mentioning a possible webcast that didn't mention the use of our network, we need to proceed carefully so we don't lose or delay good MLSO and GONG data while trying to support this webcast during this special event.
