CoMP COMMENT BY BEN: Sun Mar 25 01:53:13 GMT 2012

I have been running CoMP waves program all day. To try and check out why we skip some waves frames.

Turning off "on-access" virus scanner to the data drive on CoMP appears to have fixed the drop wave iamge problem. With t  
he new scanner configuration no images have been dropped after a few hours.

As a secondary test I have also been able to copy data without skipping any images.

This problem has likely been resolved, but more monitoring to come.
